

### **Covid 19 Rapid Testing Frequently Asked Questions**

**Why do this?** The latest information from Health Canada suggests that up to 1/3 of people carrying the virus are asymptomatic causing little or no noticeable signs, however, over 50% of known cases were transmitted by an asymptomatic carrier. This makes it incredibly important to find asymptomatic carriers in order to combat the spread and get to more normalized community life. A COVID-19 rapid screening test can be performed anywhere (e.g. on-site, at the place of employment) and does not require shipping a specimen to a lab for processing. It takes approximately 15 minutes to yield a result. Frequent screening with rapid antigen tests increases the chances of early identification of cases in asymptomatic individuals. Recommended frequency is at least twice per employee, per week. Ontario has also released guidance for organizations that choose to participate in COVID-19 testing that falls outside of the public health care system, to ensure there is appropriate oversight and consumer protection and that public resources are supporting public health initiatives.

**Who can businesses give screening kits to and who can we screen?** At this time, you CANNOT give kits to anyone. They are ONLY for use with your employees that are frequently coming to the workplace. You also cannot screen anyone else other than employees coming to the workplace, this is essential as reporting presumptive positives or inconclusive results may call into question your ability/authority to do so. Employees have the right to refuse, but when they comply that is consent to collect and report the data.

**What is the accuracy of these screens?** These are highly accurate in the range of 90% accurate, however there are circumstances where they may show a false positive or false negative.

**How do we dispose of the waste?** The screen pad and vial (with the swab and buffering agent in) are considered hazardous waste so please keep in a hazardous waste container. When you are coming to pick-up your refill orders The Windsor-Essex Chamber of Commerce has a hazardous material disposal bin for you to use.

**How is the screening administered -through the nostril or mouth?** Rapid Antigen Screening is a Nasal swab and not evasive. The requirement is the swab must be inserted into each nostril for 5 to 7 seconds 2 cm (1 inch) inside the nasal, while ensuring the inside of the nostril is wiped by the swab.

**How many staff can go to pick up and train for the screening kits?** Due to safety protocols and our training area, we are limiting in-person visits to the facility. Send ONLY one person to pick up kits.

**Can I just drop in and pick up kits for refills of my order?** If it is the same Screening Supervisor Designate you are not required to watch the video when picking up refills but we MUST insist that you book an appointment time through our online system at [WEstaysafe.ca](http://WEstaysafe.ca) For the safety of our staff and

volunteers, it is important to keep the number of people down to reduce the opportunity of close contact. This will also enable us to have your order ready for you.

**What is the next step if an employee has a Positive or Inconclusive result?** Please visit [www.wechu.org](http://www.wechu.org) for the latest guidance.

**Who can perform the screen on the employees?** The Ontario Government authorizes “self” screening using these kits. However, there is a requirement that a Screening Supervisor who has been trained via the video you watched at your initial pick-up and was sent after your initial order by email. No one other than the employee should perform the swab procedure on any employee - the supervisor is there to instruct and ensure the procedure is followed for an accurate result.

**Can I show my supervisors how to do the screens, have them watch the video to have them supervise the screens?** At this point the Ministry of Health requires that a trained individual supervises the screening process. You will receive an email after your initial pick up, contained in that email is a link to report results as well as a link to the training video to use as a refresher and/or train other supervisors.

**What is the frequency we should be screening our employees?** The recommendation from public health is that all employees should be screened at least twice per week. It is understood in some settings or with a higher frequency of close contact that some businesses will want to screen more than twice per week. Please advise us at the Windsor-Essex Chamber of Commerce and we will try our best to accommodate you. We need to ensure we have the required supply of kits at our office.

**Do these kits have an expiry date?** Yes, they do have an expiry date. Please check the side of the test kit box for the expiry date. (NOTE: The **Abbott-Panbio** kits that the Chamber has distributed to date have had the expiry date extended for one year longer than the expiry date on the box.) If you are using the **BTNX** brand of tests the expiry date on the box is the valid expiry date. Using the kits after they expire cannot be assumed to have the accuracy they do prior to expiry. Caution should be taken to review the box and ensure they are not expired.
