Bit-Wizards Emphasizes the Value of Managed IT on National IT Service Provider Day

Fort Walton Beach, FL – April 22, 2024 – Managed IT company **Bit-Wizards** underscores the importance of IT professionals and the advantages of partnering with a managed service provider (MSP) in recognition of National IT Service Provider Day. Technology issues that contribute to increased **downtime** and decreased **productivity** can be costly, and a skilled MSP can help your business avoid these hassles and **reduce IT costs by 25-45%.**

While IT should be a priority for every business, not all teams can manage their company's infrastructure independently. From **local government** to **manufacturing**, internal IT departments in any industry can feel like they're plugging holes in a sinking ship to keep their network running while managing day-to-day tasks.

"Whether they're resolving **outdated hardware and software** issues or printer problems, your managed IT provider brings the cost-effective solutions needed to succeed," says **Brian Schlechter**, Director of IT at Bit-Wizards. "Instead of your employees and customers having a negative experience due to technology issues, they get an efficient experience with managed IT."

As part of their cost-effective solutions, IT service providers can offer:

- Firewall implementation
- Device management
- Antivirus scans
- Alert monitoring
- Personnel training
- Workstation **backups**
- Network administration
- Advanced email security
- Help desk support
- Cloud-based **BCDR plans**

If you want a better-than-average IT provider, partner with the **Managed IT Services (MITS) team** at Bit-Wizards for magical IT support. Our services equip your employees and customers with high-quality IT from a team of professionals who want to help your business flourish. For more information on how our MITS experts can help you, **click here**.
