

What you may or may not know about Microsoft Teams

Often, we believe we understand how something works, but do we really? The remote work environment is a reality and needs to be incorporated sooner than later, as it will be how many organizations transform to stay competitive – both in their industry and with the talent pool.

We would like to invite you to a free Cox Business Cloud Solutions webinar that will focus on Microsoft 365 Teams.

We'll provide a deeper understanding of what Microsoft Teams can really do to help you and your business operate more efficiently and with the security you need.

You'll leave knowing benefits gained from:

Chat & Calls – In office or remote - securely collaborate in real-time discussion of business needs.

Files - Never do that frantic, searching-for-files thing ever again. In Teams you can access, share, and edit Word docs, PowerPoint, and Excel files in real time.

Channels – Dedicated sections within a Teams to keep conversations organized by specific topics, projects, disciplines to manage workflow.

Security - Teams supports team-wide and organization-wide two-factor authentication, single sign-on through Active Directory, and ensures encryption of data in transit and at rest.

Cox Business Cloud Solutions will be providing an educational session addressing the topics above.
