# NITROGEN TECHNOLOGIES OF CANADA

**NitroTech**—your leader in the  
compressed gas transportation industry.

The future of compressed gas transportation is here. Nitrogen Technologies of Canada is committed to bringing a safe and secure method of compressed gas transportation to the market. NTOC funded the research and development program knowing there was a need for volume cylinders for bulk transportation.

NitroTech has repeatedly proven to be the economical method, saving time and resources. Upstream, Midstream, Facility, Pipeline, Wellsite, Testing, Wireline - can all benefit from the advantages NitroTech has to offer the oil and gas industry.

Through innovative design and modern technology NitroTech is prepared to manufacture, supply, service and transport as needed. Stationary storage of compressed gas is also available if that is the requirement.

**NitroTech is certified by** US DOT and Transport Canada for bulk transportation of AIR, ARGON, HELIUM, HYDROGEN, METHANE, COMPRESSED NATURAL GAS (CNG), NITROGEN, OXYGEN, and COMPRESSED GAS N.O.S.

# NITROTECH

## FUSING INNOVATION, EFFICIENCY, RELIABILITY AND SAFETY

NitroTech Founder, Owner and CEO Camille Lagace believes in building strong relationships, both personally and professionally. As a skilled, transparent communicator, Camille has forged valuable, long-lasting connections with key oil and gas industry stakeholders as well as The Grande Prairie and District Chamber of Commerce. With his willingness to implement and fine-tune as required, Camille and his business have revolutionized the industry through a steadfast commitment to innovation, efficiency, reliability and safety.

Camille's background in completions and production paired with his unwavering determination to implement, improve and try new things led him to pursue his own business. In the beginning, he purged equipment with nitrogen using heavy, hard-to-handle, low-volume steel cylinders, a process he admits was tedious and cumbersome. There had to be a better, more efficient solution.

With this in mind, he developed a composite cylinder that could handle a higher volume of product. "It was a niche between the conventional steel cylinders and nitrogen pumpers. There was quite a gap," he recalls, "Many jobs needed more than what the steel cylinders could handle, but the existing pumper was still too much for the smaller jobs."

In 2007 Camille founded NitroTech, immediately working on this new product and approaching Transport Canada for guidance about what would be most needed within his industry, without compromising safety. His measured, conscientious approach smoothed the approval and protocol testing processes, filling that significant industry gap and creating long-term success for his business.

While his initial goal was to develop this and offer it to other companies, Camille confesses that it took time and patience to convince people to try his new, innovative product. "I had to bring it to the next stage, to actually use it, show them how it works and supply this service," he explains. From there, NitroTech expanded into its main focus, nitrogen, and also into compressed natural gas, following the ebb and flow of his industry's needs. "By fine-tuning our own process, we modified and developed different sized cylinders and pressure ratings to do a broader range of work."

Moving into the future, Camille believes in a conscious, sustainable approach to energy growth and development. "Our current sector will have to be here for a while to support the move towards going green," he notes. "A lot of power generation actually comes from natural gas. Going forward with liquefied natural gas and being able to offer that around the world is a great thing for us as we slowly move towards greener energy helping it build the infrastructure it needs."

Within his business, Camille most enjoys interacting with and getting to know his respected clients. As he explains: "Things just go a little

smoother when you're talking to someone and developing an understanding of each other. You get to know the person and you're able to interpret their words and actions more clearly. We're here to explain their options, offer suggestions and answer their questions, but we ultimately leave the decision-making to them." NitroTech treats every client with unparalleled professionalism and courtesy, getting the job done right and leaving room for a mutually beneficial relationship to flourish.

Above all, Camille wants clients to feel confident and happy doing business with NitroTech. He accomplishes this by being approachable, following up, asking how each job went, and refining and adjusting as needed. When considering changes to the company or its processes, Camille thoughtfully explores all of his options before making decisions. NitroTech's clients are grateful to work with Camille and appreciate his integrity, consistency and dependability.

A longtime Grande Prairie and District Chamber of Commerce supporter, Camille has also been a part of The Peace Region Energy Show since the very beginning, even before he founded NitroTech. "The show is great for public relations," he says, "drawing people to town and helping the local economy." Camille understands The Peace Region Energy Show's benefits to both the oil and gas industry and the community of Grande Prairie as a whole.

"There's value not just for existing companies, but also for startup companies seeking exposure, visibility and the opportunity to rub elbows with people you work with. We get people from every level of our industry here." Camille also says the show is important for building relationships between companies and service providers. "At the show you get to interact with the people you work with, shake hands and strengthen existing relationships. It's not just about connecting companies to clients; it can really strengthen strategic partnerships between businesses, too."

Camille appreciates the value The Chamber of Commerce provides by hosting key events like The Peace Region Energy Show. "The Chamber has a vested interest in bringing people together and making things better for the region, offering opportunities for people to connect with and learn from each other," he says. "They do a lot of great work and give back through their advocacy and reciprocal relationships with me and others in our community."

Through creating strong, long-lasting relationships, Camille Lagace has built a reputation for excellence in his industry and beyond. Camille's skilful ability to communicate clearly and effectively has contributed to the tremendous success of his business, his solid partnerships with key industry stakeholders as well as the Grande Prairie and District Chamber of Commerce. By fusing innovation, efficiency, reliability and safety in his business, NitroTech, he has earned himself tremendous success in the energy industry for decades to come.

# WELCOME

The Grande Prairie & District Chamber of Commerce and the Grande Prairie Petroleum Association are thrilled to welcome you to our inaugural Peace Region Energy Show (PRES)!

PRES follows in the footsteps of our very successful and popular Peace Region Petroleum Show which ran biennially from 1995 to 2019. Re-branding our Petroleum Show to the Energy Show keeps us relevant and inclusive. It gives our traditional industry partners and exhibitors the platform to showcase their businesses and tell their stories, while opening the doors for emerging technologies and the renewable energy sector.

The continuing partnership between our organizations allows us to bring you one of the largest energy trade shows in Western Canada, featuring hundreds of exhibiting companies. We are excited to have participating booths inside and outside the TARA Centre, one of the premier trade show facilities in the province, in the beautiful setting of Evergreen Park in the County of Grande Prairie.

We hope to connect you with potential business clients, employees, producers, suppliers, and contractors while also creating opportunities to renew old friendships and build new relationships within the energy industry. There's also the chance to find out more about the latest equipment, technology, and projects from those involved.

The petroleum sector is one of the pillars of the Peace Region's economy, and has made major contributions to the quality of life enjoyed by our residents. The Grande Prairie Petroleum Association annually supports a wide variety of organizations and events in the community. The Grande Prairie & District Chamber of Commerce has nearly 12-hundred member-businesses and is the third largest chamber of commerce in Alberta, allowing it to be a strong advocate for the industry and provide a unified voice for companies to all levels of government.

If you are a visitor to the area, we hope you take some time during your stay to sample our local businesses and enjoy the natural beauty, attractions, and hospitality that can be found in the County of Grande Prairie, the City of Grande Prairie, the Municipal District of Greenview, and the surrounding communities.

We encourage you to exchange ideas, discuss the past, present, and future, and let's truly celebrate our energy industry.

## **Tanya Oliver**

# VITAL TO CYCLIC ENVIRONMENTS

2"-10", up to 3,000 psi

**NEXT GENERATION LINE PIPE.** FlexSteel is the revolutionary steel-reinforced spoolable line pipe at the heart of cyclic applications. Tough enough to withstand the pulsating and cyclic pressures common in water injection and disposal lines, FlexSteel also offers exceptional corrosion resistance during crucial operations. With its proven reliability, FlexSteel is the best choice for cyclic environments – so the vitality of your operations remains in good health.

A photograph of a man from behind, wearing a dark baseball cap and a plaid shirt, talking on a mobile phone. He is standing in a field with tall grass under a warm, golden light, suggesting sunset or sunrise. A dark blue semi-transparent box covers the lower-left portion of the image, containing white text.

## *Making changes to your farm?*

- Expanding farmable land
- Fixing drainage issues
- Land use changes
- Fencing

These are all high risk activities when it comes to pipeline safety.

You may not think you live near a pipeline, but are you 100% sure?

Prevent pipeline incidents by finding out what's below, BEFORE you start your work.

Visit [www.clickbeforeyoudig.com](http://www.clickbeforeyoudig.com) to request a locate at least 3 days prior.

**Safety can be that simple.**
