# Localisation:

Localisation is critical for all companies to consider when **communicating with foreign markets** or **communicating with staff from diverse backgrounds**.

The way a document is written, images that are used, and even the use of colloquialisms makes a difference in the way communication is perceived by others.

A **multi-lingual website** is a website where the content is written in more than one language. The information displayed in different languages is often the same but should be tailored for different audiences.

Website Localisation isn't simply translating text; it is adapting to the culture and moving a site from single-language focus to a more flexible, global perspective.

Our native speaking e-commerce specialists will select the appropriate style to translate and transcreate your content accurately and effectively, **ensuring global sensitivity**.
