Turf Reinforcement Mat	n/a	A product composed of UV-stabilized non-degradable synthetic fibers, filaments, nets, wire mesh and/or other elements, processed into a permanent, three-dimensional matrix which may be supplemented with degradable components.	≥ 2.0 lbs/ft² (96 Pa)	≥ 10.0 lbs/ft² (479 Pa)	<u>></u> 250 %	≥ 200 lbs/ft (>2.9 kN/m)	≥ 200 lbs/ft (>2.9 kN/m)	≥ 8.0 lbs/yd² (≥ 271 g/m²)	≥ 0.25 in (<u>></u> 6.35 mm)	.≥ 80% @ 500 hrs	
TriNet Straw/ Coconut	American Excelsior Company	Biocomposite TRM	3.2 lbs/ft ²	10 lbs/ft ²	<u>></u> 250 %	553 lbs/ft	439 lbs/ft	0.824 lbs/yd ²	0.344 in	90	
Curlex Enforcer	American Excelsior Company	Biocomposite TRM	3.25 lb/ft ²	10 lbs/ft	486 %	612 lbs/ft	460 lbs/ft	0.98 lbs/yd ²	0.419 in	90	
Recyclex	American Excelsior Company	Synthetic TRM	3.38 lb/ft ²	11 lbs/ft	525 %	387 lbs/ft	340 lbs/ft	0.63 lbs/yd ^s	0.37 in	90	
TriNet Coconut	American Excelsior Company	Biocomposite TRM	3.2 lb/ft²	12 lbs/ft	<u>></u> 250 %	712 lbs/ft	703 lbs/ft	0.69 lbs/yd ²	0.264 in	90	
TriNet Curlex	American Excelsior Company	Biocomposite TRM	3.2 lb/ft ²	13 lbs/ft ²	<u>></u> 250 %	770.4 lbs/ft	802.8 lbs/ft	0.976 lbs/yd ²	0.304	90	

a. For material Types 5.E and 5.F, property values tested per ASTM 6818 and D6525 are reported as minimum average roll values (MARVs). MARVs are calculated as the typical minus two standard deviations. Statistically, it yields a 97.7% degree of confidence that any samples taken from quality assurance testing will exceed the value reported.

NOTE: TRMs are typically used in hydraulic applications, such as high flow ditches and channels, steep slopes, stream banks, and shorelines, where erosive forces may exceed the limits of natural, unreinforced vegetation or in areas where limited vegetation establishment is anticipated.

b. Required minimum shear stress TRM (unvegetated) can sustain without physical damage or excess erosion (> 12.7 mm (0.5 in) soil loss) during successive, minimum 30 minute flow events in large scale testing.

c. Acceptable large-scale testing protocol may include ASTM D6460, or other independent testing deemed acceptable by the engineer. Large scale performance testing typically involved limited soil types and vegetative stands, therefore it is recommended that an appropriate factor of safety be used in design and product selection (see Guidance Document for further information).

d. Typical values are calculated as the average value. Statistically, it yields a 50 % degree of confidence that any samples taken from quality assurance testing will exceed the value reported.

e. Required minimum shear stress TRM (fully vegetated) can sustain without physical damage or excess erosion (> 12.7 mm (0.5 in.) soil loss) during successive, minimum 30 minute flow events in large scale testing.

f. For TRMs containing degradable components, property values must be obtained on the non-degradable portion of the matting alone.
