

VerveFlair User Guide

Overview:

VerveFlair is energetic, flexible and ready for your multipurpose needs. This responsive theme is an ideal solution for any business or association looking to make their content pop with a modern, professional website that brings enthusiasm.

The Landing page features an animated hero graphic that overlays the background. Great for grabbing the users' attention. And, there is plenty of room to list features, deliver a message, give an introduction or display a photo gallery.

Features:

These are optional and included by default. Any content area or widget can be removed or replaced with another.

- Animated graphic overlay on hero background
- Icon boxes
- Testimonial area
- Landing page photo gallery
- Image or Logo Carousel

Capabilities/and How To's:

- **Header and Footer:** These are set up with the Beaver Themer add-on. They can be edited within the page editor just as you would a page. To access the Beaver Themer options go to the [Dashboard > Builder > Theme Layouts](#)
- **Animated Hero Overlay Graphic:** This is a photo placed inside the left column. The animation options can be found within the Advanced tab of the widget. Once in the [Page editor > Photo settings \(tool icon\) > Advanced Tab](#). The background behind the graphic can be a parallax image, video, solid color, single image or a slide show. Click on the [Page editor > Row Settings](#) (the tool icon that displays when you hover over the background area). In the pop up window under the 'Style' tab you can select your preferences.
- **Icon boxes:** This is set up as a 3-column area with individual icons and titles. The icon widget can be found at [Page editor > Advanced Modules > Icon](#).
- **Testimonials Slider:** This is a drag and drop widget that can be found at [Page editor > Advanced Modules > Testimonials](#). You can also use a 'Content Slider' widget for this.

- **Photo Gallery:** This uses the 'Gallery' widget by default. It can be found under [Page editor > Advanced Modules > Gallery](#). If you would like the images to be linkable you could use the 'Logo Grid & Carousel' Widget (found under [Page editor > PowerPack Modules > Logo Grid & Carousel](#)), or by placing an image directly into the content area or column background.
- **Image or Logo Carousel:** This is a drag and drop widget that can be found at [Page editor > PowerPack Modules > Logo Grid & Carousel](#).
