Schedule of Events:

7:30-8:00AM	MNSEA General Meeting
8:00-8:15AM	Sponsor Introduction & Break
8:15-9:15AM	Session 1: ASCE 7-16 Wind Provisions & What's Coming in ASCE 7-22
9:15-9:30AM	Break
9:30-10:30AM	Session 2: Frequently Misunderstood Wind Provisions
10:30-10:45AM	Break
10:45-11:45AM	Session 3: Wind Loads on Non-Building Structures
11:45AM	Adjourn

ASCE 7-16 Wind Provision Updates & What's Coming in ASCE 7-22: 8:15-9:15AM

Donald Scott, PCS Structural Solutions

As an integral part of the building codes in the United States, the currently adopted ASCE/SEI 7-16: Minimum Design Loads and Associated Criteria for Buildings and Other Structures describes the means for determining natural hazard loading, including wind loads, on buildings and other structures. Current efforts are nearing completion of the first-ever tornado loading for buildings for incorporation into the 2022 edition of the ASCE 7 standard, along with the use of Performance-Based Wind Design principles being added to the standard. This presentation will look at the current major provision updates that have been incorporated into the ASCE 7-16 provisions as well as what is being incorporated into ASCE/SEI 7-22.

Frequently Misunderstood Wind Provisions: 9:30-10:30AM

Emily Guglielmo, Martin/Martin, Inc.

This seminar will focus on wind provisions of ASCE 7/ IBC that are frequently misunderstood or incorrectly applied, including building enclosure classification, torsional wind design, effective wind area, and wind load analysis methods. It will also highlight areas where the code does not offer guidance on frequently encountered situations, including irregular building configurations. Lastly, this webinar will focus on ASCE 7-16 and look to the future of wind design.

Wind Loads on Non-Building Structures: 10:45-11:45AM

Emily Guglielmo, Martin/Martin, Inc.

This session will focus on wind loads on non-building structures, including rooftop equipment, screenwalls, solar PV, canopies, and signs. The session will discuss ASCE 7 wind load provisions for non-building structures and how to correctly apply them through examples. An in-depth exploration for engineering commonly encountered situations that are not directly addressed in the code will follow.

Presenter Biographies:**Emily Guglielmo, PE, SE.**

Emily Guglielmo earned her Bachelor's Degree in Civil Engineering from UCLA, and her Master's Degree in Structural Engineering from UC Berkeley. She has nearly 20 years of structural engineering experience, all with Martin/Martin, Inc. She began her career in their Denver, CO area office, and is currently a Principal with the firm, managing their San Francisco Bay Area office.

She has lectured on wind provisions across the nation and internationally. Emily is the Chair of the NCSEA Wind Engineering Committee and serves as a voting member on the ASCE 7 wind committee. A licensed SE, Emily has received a number of awards, including SEI Fellow and the Susan M. Frey NCSEA Educator Award, for effective instruction for practicing structural engineers.

**Donald R. Scott, SE.**

Donald R. Scott is a Senior Principal with PCS Structural Solutions. Mr. Scott has over 38 years of experience in the design, evaluation, and rehabilitation of building structures. He was the principal investigator for the ASCE/SEI Prestandard for Performance-Based Wind Design. Mr. Scott is Chair of the SEI Codes and Standards Executive Committee, Chair of the ASCE 7 Wind Load Subcommittee, member of the ASCE 7 Main Committee and past Chair of the NCSEA Wind Engineering Committee.

Mr. Scott is a member of the SEI Board of Governors and a past President of the Board of Directors of the Applied Technology Council.

& Development

Founded in 1897, Molin Concrete Products is a proud designer, manufacturer, and installer of precast/prestressed concrete components. Recognized for excellence in the construction industry, Molin Concrete serves as a single source for the complete precast/prestressed building system throughout the 7-state Midwest region.

As an innovative manufacturer of structural and architectural precast/prestressed concrete products, we work with your project team from the early stages of design development to completion. By offering product design, production, and installation of high-quality certified products, Molin can overcome the challenges of any project to achieve the best result.

Headquartered in Lino Lakes, MN, Molin Concrete Products also operates a state-of-the-art automated wall panel production facility in Ramsey, MN.

Development Manager
gary.hahn@subsurfaceconstructors.com

For more than 110 years, Subsurface Constructors has been a Midwest leader in deep foundation construction. Today, we're also recognized as one of the most experienced and reliable ground improvement contractors in the U.S. We bring innovative, value-added approaches to engineers and contractors nationwide – with the expertise and equipment to deliver any geotechnical project. Our engineers work directly with engineering and design teams to optimize foundation systems to achieve the most economical bearing pressure, while keeping building costs as low as possible.
