VENUE REVITALIZATION SPECIALISTS

Clorox[®] Total 360[®] is a hard surface disinfecting system that uses electrostatic spray to kill viruses, bacteria and germs. Electrostatic spray is electrically charged, allowing the appropriate sanitizers and disinfectants to wrap around and evenly coat all types of surfaces for a more complete clean.

Used throughout your facility in all public and common spaces, locker rooms, fitness rooms, bathrooms, dining areas, lobby, back of house, offices and food preparation areas it creates a disinfected and healthier environment.

Within a property we perform a complete disinfection by targeting all common hard surfaces and touch points such as light switches, sinks, toilets, faucets, door handles, hand rails, restroom walls, countertops, stall partition walls/doors, towel/soap, dispensers, tables, chairs, keyboards, phone, reception desks, benches..., and other unique touch points in your hotel.

We are only working with chemical included in the Center for Disease Control and Prevention List N of Disinfectants for Use Against SARS-CoV-2.

The process is fast! Most areas are completed in few minutes and can be reopened in 10 minutes.

As a HANTX member, you receive a discount off our services.
