

## Angles and Lines Vocabulary Terms Worksheet

Look up the meaning for each of the following terms that we will be using. Draw a picture for each term. The first 3 have been done for you.

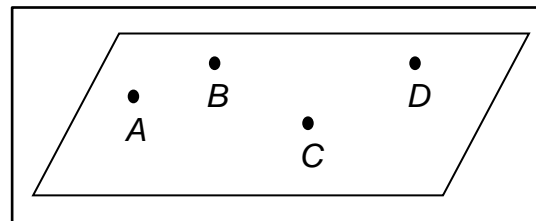

1. **Point:** Is infinitely small and has only location. A point is usually represented by a dot like the period at the end of a sentence but has no area.

2. **Line:** A straight arrangement of points. A line extends infinitely but has no thickness. Three or more points on the same line are said to be **collinear** (passing through a single line). Points *R*, *S*, and *T* are collinear and points not on the same line are said to be **noncollinear**.

3. **Plane:** A flat surface that extends without end, has no thickness, and contains infinitely many points.
