2023

was world's hottest year
on Earth*

66% of chance to breach
1.5 C° climate threshold
by 2027*

Increase in greenhouse gas emissions in the atmosphere is causing extreme climate events. We will probably face more and more:

HIGHER TEMPERATURES

HEAVIER STORMS AND FLOODS

THREAT TO BIODIVERSITY

INCREASE IN DISEASES

FOOD PRODUCTION SHORTAGES

RISK TO HUMAN LIFE

THE inequality is a global challenge

According to the United Nations,

1.1 billion

people are poor in the World

84% of all poor people live in rural areas

75% of all poor people live in middle-income countries

50% of all poor people (566 million) are children under 18 years
