84th Annual Meeting of the Association for Information Science and Technology

Information: Equity, Diversity, Inclusion, Justice, and Relevance.

For 84 years, ASIS&T researchers and practitioners, along with those from related fields, have been pushing advancements in information understanding, technology, and use, making substantial progress and contributions. However, the nirvana hinted at by Vannevar Bush with the sum total of human knowledge at our fingertips is not so blissful. With the advantages, we also see hate speech, rumors, conspiracy theories, cyberbullying, AI systems turned racist, fake news, click fraud, adversarial IR, privacy concerns -- the list goes on. What happened? As the premier international conference dedicated to the study of information, people, and technology in contemporary society, the ASIS&T Annual Meeting is a forum to assist in addressing these issues as we continue to push forward the positive contributions of information and technology.
